Jerry Flores
Ford Foundation Fellow
UC President's Post-Doctoral Fellow
Assistant Professor of Criminal Justice, University of Washington-Tacoma

Caught Up follows the lives of 50 Latina girls in “El Valle” Juvenile Detention Center and “Legacy” community school located 40 miles outside of Los Angeles, CA. Their path through these two institutions reveals the accelerated fusion of California schools and institutions of confinement. For example, the connection between both of these sites is a concerted effort between Legacy Community School and El Valle administrators to provide young people with wraparound services. These well-intentioned services are designed to provide youth with support at home, at school and in the actual detention center. However, I argue that wraparound services more closely resemble a phenomenon that I call wraparound incarceration, where students cannot escape the surveillance of formal detention despite leaving the actual detention center. For young people in Legacy School, returning to El Valle became an unavoidable consequence of wraparound services.

Jerry Flores is a Ford Foundation Fellow, UC President's Post Doc (UCSF) and Assistant Professor of Criminal Justice in the Social Work program at the University of Washington-Tacoma. His research investigates how Latinas negotiate gender and violence in a California juvenile detention facility and in a continuation school that is connected to the facility. His research also shows how educational and penal institutions are coming together in new and dynamic ways. Finally, his work provides a microanalysis of Chicanas passing through the school-to-prison pipeline. His other research areas include ethnographic research methods, studies of race/ethnicity and issues dealing with institutional and interpersonal pharmaceutical abuse.
